

# CE810 - Game Design 2

## Procedural Generation

---

Joseph Walton-Rivers & Piers Williams

Tuesday, 15 May 2018

University of Essex

## Question

What do we mean by procedural generation?

The act of **creating** content for games using **algorithms** as opposed to being **hand-crafted** by a human creator.

## A few notes...

- Far too broad an area for a single lecture

## A few notes...

- Far too broad an area for a single lecture
- we'll try it anyway...

## A few notes...

- Far too broad an area for a single lecture
- we'll try it anyway...
- Used in lots of modern (and old school) games

## A few notes...

- Far too broad an area for a single lecture
- we'll try it anyway...
- Used in lots of modern (and old school) games
- When done well can add to a game

# No Mans Sky

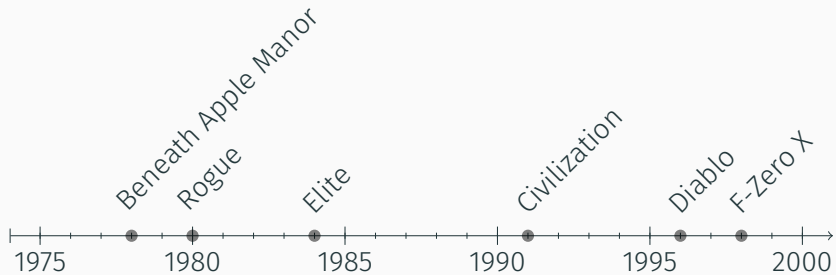

# No Mans Sky

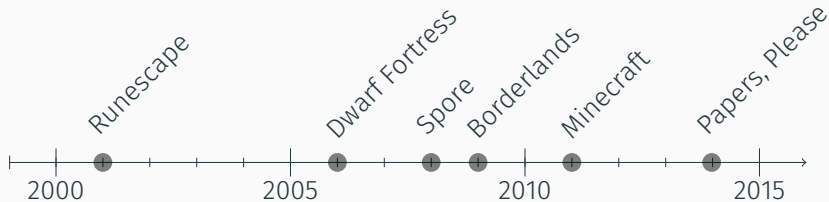

ok... maybe not that one.

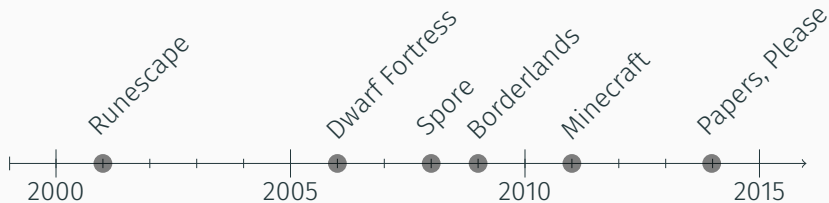

# Early Procedural Generation

# History of Procedural Generation

# History of Procedural Generation

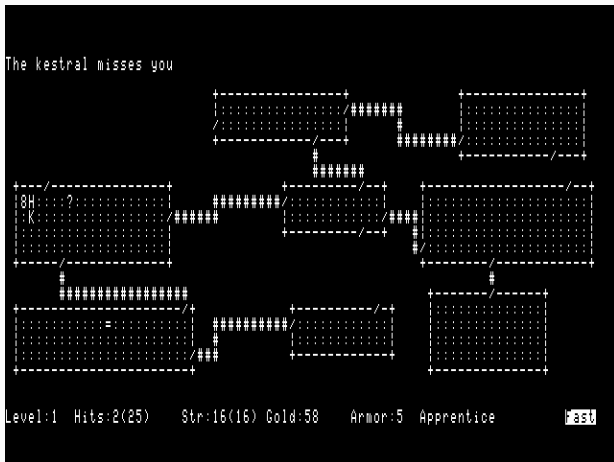

One of the most common uses for procedural generation is levels

# Level Generation

---

# Rogue

- Spawned an entire genre based on procedural generation.
- Randomly generated dungeons

## Question

What methods are commonly used for generating levels?

## Question

What methods are commonly used for generating levels?

- Binary Space Partitioning
- Random walks
- Cellular Automata
- Answer Set Programming
- Noise-based
- Grid Based

# Cellular Automata

- Some states (2 or more)
- You need a rule (eg, if at least 4 of your neighbours are alive, then return alive, else return dead.)

```
for tile in grid:  
    neighbors = get_alive_neighbours(tile)  
    grid[tile] = rule(neighbours)
```

Demo

## Grid Based

- Split the map into blocks
- Pick (or generate) a template for each block
- Place template on grid

Examples: *UFO: Enemy Unknown*, *Spelunky*

# Noise Based

- Generate noise (usually gradient Noise)
- Interpret noise as values
- Place template on grid

Examples: *The Dwarves of Glistenveld*, *Minecraft*

# Assets

---

# Generating Assets

- Mostly game specific
- Not as much available publicly about how these are done.

- Used widely by games and film industry
- Mixed procedural generation and hand-crafted

A bit like this...

# Borderlands

- Randomly generated weapons
- Over 17,750,000 different combinations
- Lots of properties which determines effects

# Galactic Arms Race

- Generate Weapons based on particle systems
- Based on NEAT evolutionary algorithm
- Choices based on what the player does
- Adapt to the player's experience based on usage

Demo on their website

# Papers, Please

- Procedural generated people with procedurally generated documents
- Gameplay dependant on unpredictability
- Hand crafted story elements

## Full Games

---

- Evolve rulesets for a given environment
- Uses learnability as predictor of fun

- What about games?
- We can try and generate those to
- Try to evolve games that need skill
